ENHANCE YOUR BUSINESS' ENVIRONMENTAL PERFORMANCE

What is the Green Performance Toolkit?

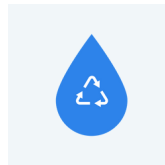

The Green Performance Toolkit is a free online tool for businesses to help them assess and track their environmental performance across eight areas:

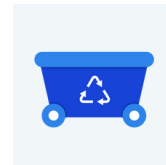

Environmental
Management
System

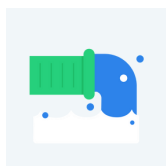

Energy

Water

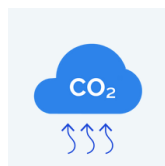

Waste

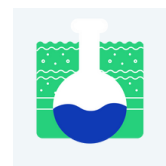

Wastewater

Air Emissions

GHG Emissions

Chemicals and Soil

The tool enables businesses to assess their environmental performance on two levels:

- Qualitative assessment, which provides a high-level view of your business environmental stewardship.
- Quantitative assessment, which allows you to track your business performance in the areas of energy, water, waste, and wastewater through time, as well as indicates how far your company is from your target consumption levels.

Furthermore, improvement checklists are available with information on best practices and information sheets, along with a series of resources to help your company develop a green strategy and improve your environmental performance over time.

The Green Performance Toolkit was developed by the Trade and Environment Programme of the International Trade Centre (ITC) and financed by the United States Agency for International Development (USAID).

How can my business benefit from it?

By taking the different environmental assessments, your business can:

- ✔ Identify gaps in terms of resource use and management and identify improvement areas.
- ✔ Monitor and track your environmental performance over time.
- ✔ Learn how to reduce production costs and increase productivity.
- ✔ Start preparing for environmental certification.

How does it work?

1

ACCESS THE GREEN PERFORMANCE TOOLKIT

To access the tool, visit:
greenperformance.intracen.org

2

RUN A RAPID ASSESSMENT

Start by running a qualitative assessment of the areas of your choice.

3

CREATE AN ACCOUNT OR LOGIN

After completion, login or create a free user account* to save your answers and access the other qualitative and quantitative assessments.

4

PERFORM THE SELF-ASSESSMENTS

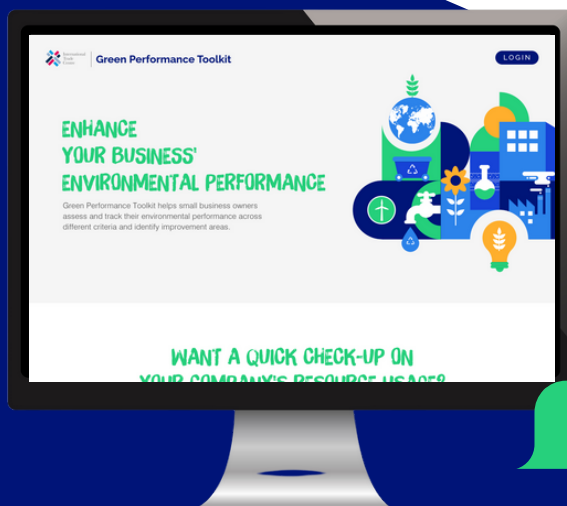

Navigate the left-hand side menu to assess your performance in the areas previously mentioned. For energy, water, waste and wastewater, you will be able to take a quantitative assessment of your resource consumption on top of the rapid assessment.

5

GET YOUR RESULTS AND CHECK AREAS FOR IMPROVEMENT

You can access your results in the “Summary Report” section, which will also give you the chance to download them in PDF. Browse the “Checklists” section to assess your company’s improvement potential in energy, water and waste; and don’t forget to check the “Resources” tab for additional information and reference materials!
